Purified Antibody Characterization

Clone	Isotype	Reactivity
SK3	Mouse IgG1	Human

Description

CD4, also known as T4, is a 55 kD single-chain type I transmembrane glycoprotein expressed on most thymocytes, a subset of T cells, and monocytes/macrophages. CD4, a member of the Ig superfamily, recognizes antigens associated with MHC class II molecules and participates in cell-cell interactions, thymic differentiation, and signal transduction. CD4 acts as a primary receptor for HIV, binding to HIV gp120. CD4 has also been shown to interact with IL-16. The SK3 antibody binds to the D3 domain of CD4 and does not block HIV binding.

Illustration of Immunofluorescent Staining

Human peripheral blood lymphocytes stained with PerCP anti-human CD4 and FITC anti-human CD3

Product Information

Conjugation: PerCP

Formulation: PBS pH 7.2, 0.09% NaN₃, 0.2% BSA.

Storage: Keep as concentrated solution. Store at 4°C and protected from prolonged exposure to light. **Do not freeze.**

Application: Recommended Application: FC

Usage: Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis (The amount of the reagent is suggested to be used from 20 µL to 5 µL per 100 µL of peripheral blood. Please check your vial). Since applications vary, the appropriate dilutions must be determined for individual use.
