**Important Note:** Centrifuge before opening to ensure complete recovery of vial contents. This product is guaranteed up to one year from purchase.

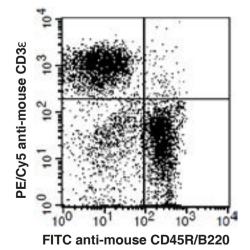

## **Purified Antibody Characterization**

Clone	Isotype	Reactivity
145-2C11	Hamster IgG	Mouse

#### Description

CD3 $\epsilon$  is a 20 kD transmembrane protein, also known as CD3 or T3. It is a member of the Ig superfamily and primarily expressed on T cells, NK-T cells, and at different levels on thymocytes during T cell differentiation. CD3 $\epsilon$  forms a TCR complex by associating with the CD3 $\delta$ ,  $\gamma$  and  $\zeta$  chains, as well as the TCR  $\alpha/\beta$  or  $\gamma/\delta$  chains. CD3 plays a critical role in TCR signal transduction, T cell activation, and antigen recognition by binding the peptide/MHC antigen complex.

### Illustration of Immunofluorescent Staining

C57BL/6 mouse splenocytes stained with FITC antimouse CD45R/B220 and PE/Cy5 anti-mouse CD3ε

#### **Product Information**

Conjugation: PE/Cy5

Formulation: PBS pH 7.2, 0.09% NaN<sub>3</sub>,

0.2% BSA

Concentration: 0.2 mg/ml

**Storage:** Keep as concentrated solution. Store at 4°C and protected from prolonged

exposure to light. Do not freeze.

Application: Recommended Application: FC

**Usage:** Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis (The amount of the reagent is suggested to be used  $\leq 1.0 \, \mu g$  /10<sup>6</sup> cells in 100 μl). Since applications vary, the appropriate dilutions must be determined for individual use.
